

Agentic AI Travel Advisor & Booking System

UI Testing: Screenshots of the Running Application

Screenshots of the real user interfaces, captured while the system was running: the React web app for every role and the Flutter mobile app. Nothing is mocked: the browser talks to the ASP.NET Core API, which reads and writes PostgreSQL.

Part 1 is an automated UI test run: the 17 Playwright end-to-end tests with a screenshot of the browser at the end of each test and the real pass/fail result. **Part 2** walks through every screen of the web app by role. **Part 3** shows the Flutter mobile app. **Part 4** explains how to repeat the capture.

Companion documents: [testing/Testing-Guide-and-Report.pdf](#) (how to run the tests and read the reports) and [testing/Testing-Report-Screenshots.pdf](#) (screenshots of the test reports).

Captured on 2 Oct 2026, 11:00 IST (UI test run) and 2 Oct 2026, 11:08 IST (walkthroughs).

Test environment

Browser	Chromium, driven by Playwright (the version installed in <code>web-react</code>)
Web app	React + TypeScript, Vite dev server on <code>http://localhost:5173</code> (proxies <code>/api</code> to the API)
Mobile app	Flutter release build for web (<code>flutter build web --dart-define=API_BASE_URL=http://localhost:5080</code>), served on <code>http://localhost:4173</code> , 412 × 860 phone viewport
API	ASP.NET Core 8 on <code>http://localhost:5080</code> , Development environment (demo staff accounts seeded), rate limits raised for the test session
Database	Local PostgreSQL on port 5432 (the API's development database)
AI assistant	The configured model key is a placeholder, so the replies came from the rule-based agents (each reply is labelled "Rule-based") using the real catalog and booking tools
Data	The database also holds data created by earlier automated runs: "E2E ...", "IT Mobile ...", "Newman ..." and "k6 ..." hotels, accounts and bookings. They appear in lists and in the owner's statistics.

Results at a glance

Part	What ran	Result
1. UI tests (Playwright)	17 end-to-end tests on the real stack	17 passed, 0 failed, 0 flaky, 0 skipped (34.8 s)
2. Web walkthrough	34 screens across 7 roles and viewports	34 captured, none failed
3. Mobile walkthrough	11 screens of the Flutter app	11 captured, none failed

The walkthroughs are screenshots, not tests: each screen lists the automated tests that cover it, and says so where a page has no dedicated test.

Part 1. Automated UI test run (Playwright)

The existing suite `web-react/e2e/` was run unchanged, with screenshots switched on for every test. Each test drives the React app in Chromium against the real API and database; several also check the stored rows in PostgreSQL.

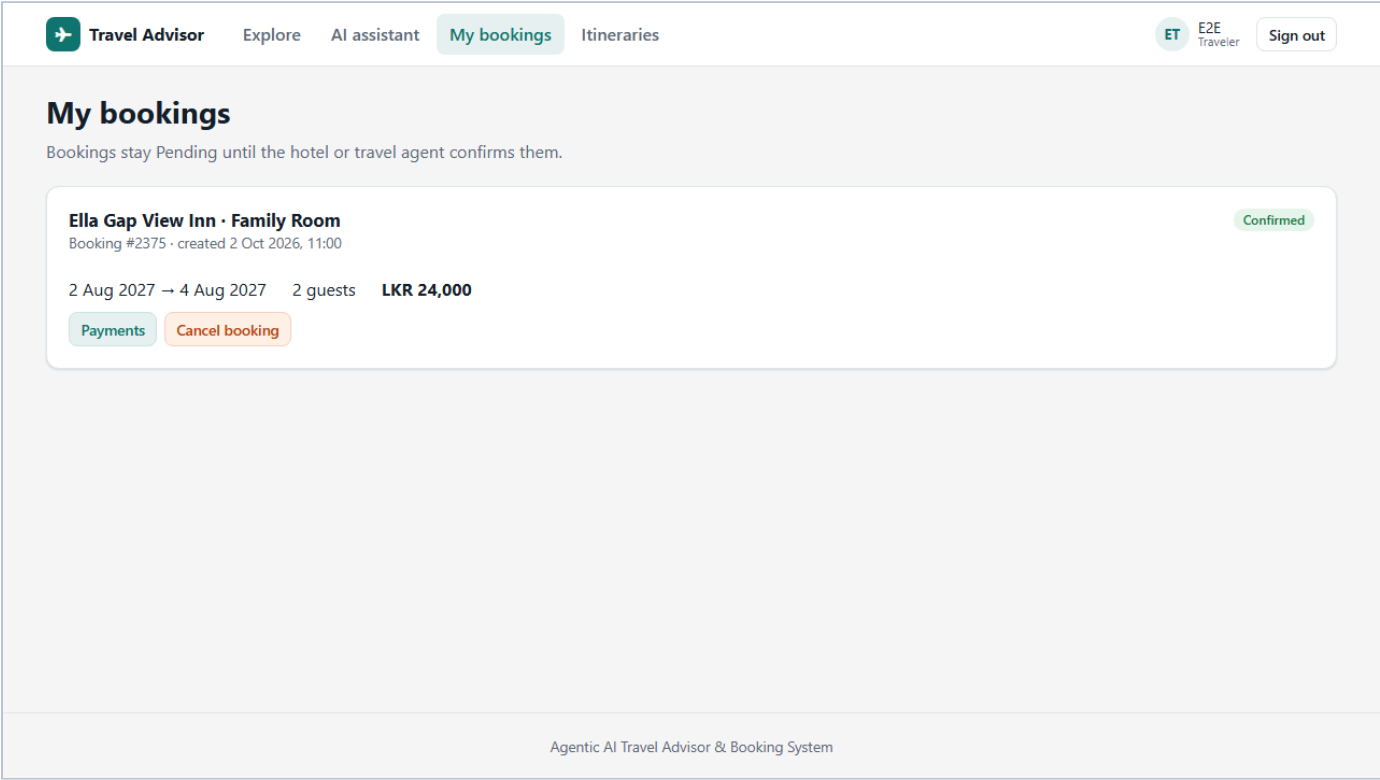

#	Test	Result	Time
1	Full journey: UI -> API -> AI -> PostgreSQL -> itinerary -> booking -> confirmation a traveler plans, saves and books with the assistant; the owner confirms; every step is in the database	PASSED	10.3 s
2	Authentication and role-based access (real API) ADMIN signs in, lands on their home page and sees only their navigation	PASSED	0.7 s
3	Authentication and role-based access (real API) HOTEL_OWNER signs in, lands on their home page and sees only their navigation	PASSED	0.7 s
4	Authentication and role-based access (real API) TRAVEL_AGENT signs in, lands on their home page and sees only their navigation	PASSED	0.7 s
5	Authentication and role-based access (real API) wrong password shows the API error and stores no session	PASSED	0.6 s
6	Authentication and role-based access (real API) a new traveler registers, keeps the session after reload, and the account exists in the API	PASSED	0.7 s
7	Authentication and role-based access (real API) the server rejects a weak password that passes the client-side length check	PASSED	0.5 s
8	Authentication and role-based access (real API) a traveler cannot open admin, owner or agent pages, and the API refuses the data too	PASSED	0.9 s
9	Authentication and role-based access (real API) an anonymous visitor is sent to login and returned to the page they asked for	PASSED	0.5 s
10	Authentication and role-based access (real API) a tampered token is rejected by the API and the user is asked to sign in again	PASSED	0.6 s
11	Direct booking workflow: traveler -> API -> PostgreSQL -> provider confirmation a traveler checks availability and books; the booking is stored as Pending with the server-side price	PASSED	1.1 s
12	Direct booking workflow: traveler -> API -> PostgreSQL -> provider confirmation a second traveler cannot double-book the same room for overlapping dates	PASSED	0.7 s
13	Direct booking workflow: traveler -> API -> PostgreSQL -> provider confirmation the hotel owner confirms the booking and the traveler sees the confirmed status	PASSED	4.2 s
14	Provider listings and admin approval (real API + PostgreSQL) a hotel owner creates a hotel and a room; it stays hidden until approved	PASSED	1.4 s
15	Provider listings and admin approval (real API + PostgreSQL) the admin approves the hotel and travelers can find it in search	PASSED	1.1 s
16	Provider listings and admin approval (real API + PostgreSQL) a travel agent sees form validation, then creates a package that the admin rejects	PASSED	1.6 s
17	Provider listings and admin approval (real API + PostgreSQL) a second hotel owner created by the admin cannot see or edit the hotel; its owner can delete it	PASSED	2.1 s

UI test 1. a traveler plans, saves and books with the assistant; the owner confirms; every step is in the database PASSED

web-react/e2e/ai-journey.spec.ts:33 · Full journey: UI -> API -> AI -> PostgreSQL -> itinerary -> booking -> confirmation · 10.3 s

Steps checked:

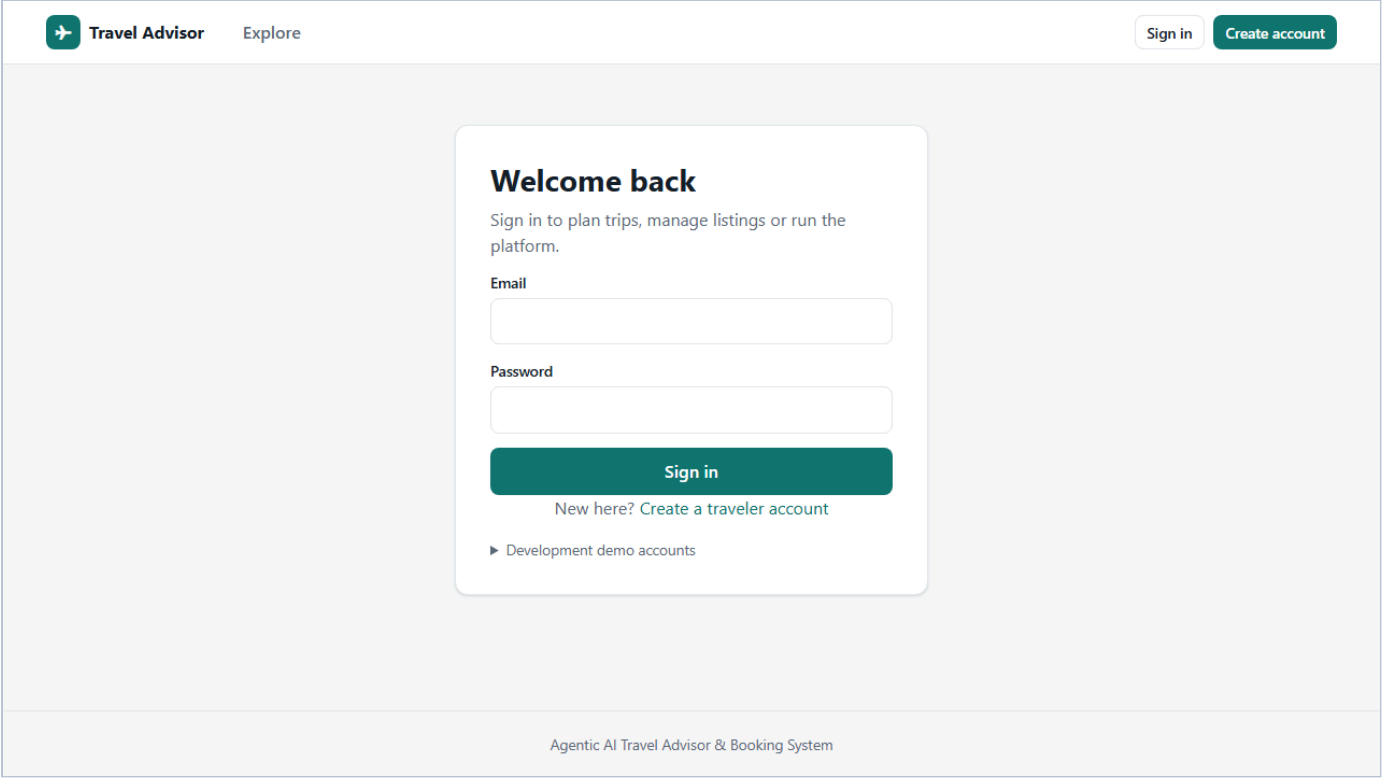

- 1. register in the UI: the account is stored with the USER role
- 2. ask for a plan: the AI uses the live catalog and the conversation and recommendations are stored
- 3. save the plan: the itinerary and its day-by-day items are stored for this traveler
- 4. ask to book: the AI proposes, and nothing is written to Bookings until Confirm
- 5. the booking row matches the proposal, with the price computed from the room rate
- 6. the hotel owner confirms in the UI: the row becomes Confirmed
- 7. the traveler sees Confirmed in My bookings

Browser at the end of the test (Playwright screenshot: on).

UI test 2. ADMIN signs in, lands on their home page and sees only their navigation PASSED

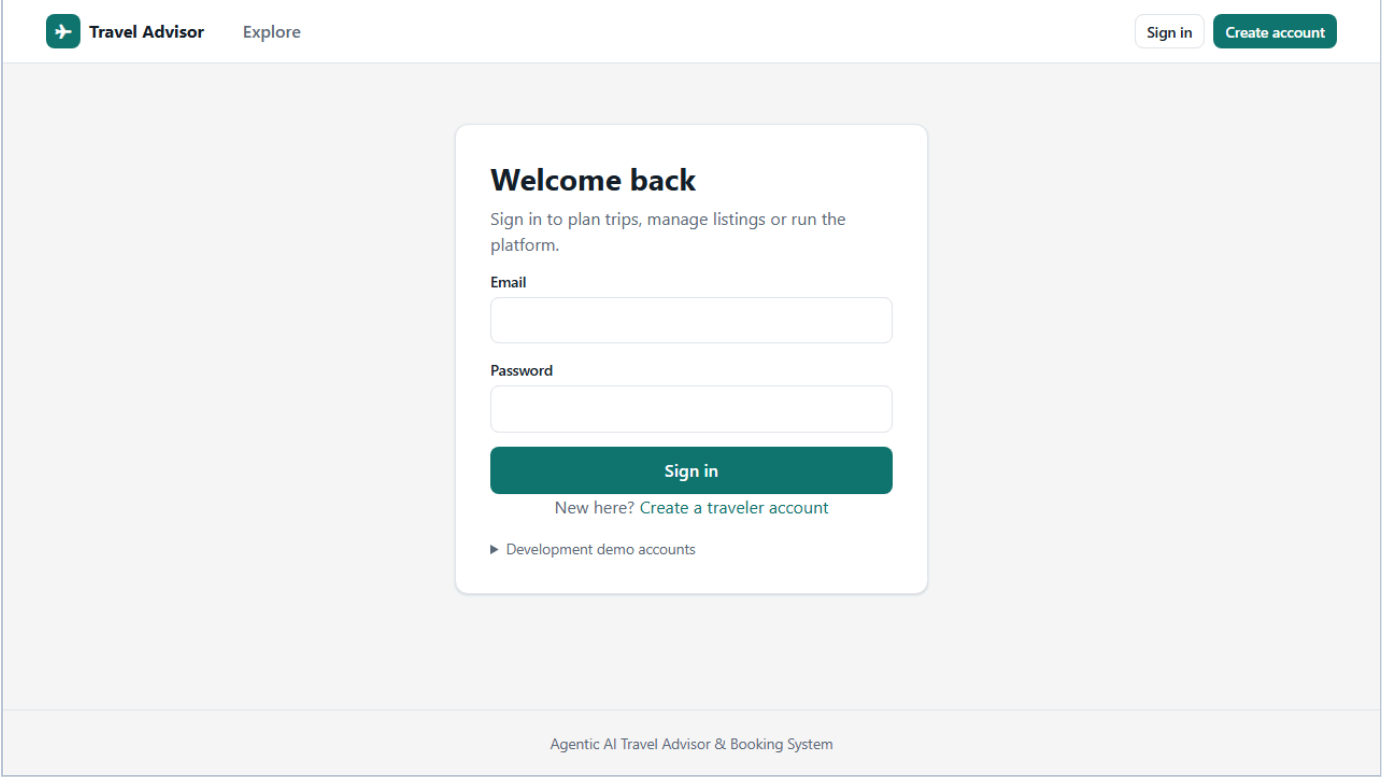

web-react/e2e/auth.spec.ts:12 · Authentication and role-based access (real API) · 0.7 s

Agentic AI Travel Advisor & Booking System

Email and password form, with a link to create a traveler account.

Automated tests: LoginPage.test.tsx; Playwright auth.spec.ts (each staff role signs in and lands on its own home page)

Screen 5. Sign-in with a wrong password

Role: Visitor · URL: /login

The screenshot shows the login interface of the Travel Advisor system. At the top, there is a navigation bar with the 'Travel Advisor' logo and an 'Explore' link on the left, and 'Sign in' and 'Create account' buttons on the right. The main content area features a central white card with the heading 'Welcome back' and a subtext 'Sign in to plan trips, manage listings or run the platform.' Below this, an orange error message box displays 'Invalid email or password.' The login form includes an 'Email' field with the value 'admin@traveladvisor.com' and a 'Password' field filled with dots. A dark green 'Sign in' button is positioned below the password field. Underneath the button, there is a link 'New here? Create a traveler account' and a link '► Development demo accounts'.

The API answers 401 and the page shows "Invalid email or password." No session is stored.

Automated tests: Playwright auth.spec.ts ("wrong password shows the API error and stores no session"); LoginPage.test.tsx

Agentic AI Travel Advisor & Booking System

The confirmation does not match the password, so the form shows "Passwords do not match." and sends nothing to the API. The password rules are shown under the field.

Automated tests: RegisterPage.test.tsx ("rejects mismatched confirmation without calling the API"); Playwright auth.spec.ts (server-side password policy)

Screen 7. AI assistant: new traveler

Role: Traveler (USER) · **URL:** /assistant

After registering, the traveler lands on the assistant. It offers example requests and states that it only uses live listings and never books without confirmation.

Automated tests: AssistantPage.test.tsx; Playwright ai-journey.spec.ts

Screen 8. AI assistant: structured trip plan

Role: Traveler (USER) · URL: /assistant?c=1114

The screenshot displays the 'AI assistant' interface. At the top, a navigation bar includes 'Travel Advisor', 'Explore', 'AI assistant' (active), 'My bookings', and 'Itineraries'. User information 'UW Ui Traveler' and a 'Sign out' button are on the right. A dark green button '+ New conversation' is on the left. A sidebar lists 'CONVERSATIONS' and 'RECENT RECOMMENDATIONS'. The main area shows a plan for a 3-day trip to Ella. A dark green box at the top of the main area contains the user's request: 'Plan a 3-day trip to Ella starting 2027-05-11 for 2 people with a budget of LKR 50000. We like hiking.' The plan details include a summary, a table of costs, and a day-by-day itinerary. At the bottom, a text input field contains a sample request, and a 'Send' button is on the right.

Plan

Here is a 3-day plan for Ella for 2 traveler(s), 2027-05-11 to 2027-05-13.
Estimated total: Rs. 48,000 of your Rs. 50,000 budget (Rs. 2,000 to spare).

Stay: Ella Gap View Inn – Family Room, Rs. 12,000/night × 2 night(s) = Rs. 24,000 (available for your dates).
Package: Pending Ella Walk, Rs. 12,000 per person incl. activities = Rs. 24,000.

Day 1 (2027-05-11):

- 14:00 Check in at Ella Gap View Inn
- 15:30 Pending Ella Walk (day 1 of 2)

Day 2 (2027-05-12):

- 09:00 Pending Ella Walk (day 2 of 2)

Day 3 (2027-05-13):

- 09:00 Explore Ella at your own pace
- 11:00 Check out of the hotel

Other options that also fit the budget: E2E Booking Hotel muqiyph8bs (E2E Garden Double, Rs. 22,000); E2E Booking Hotel mupolsbbkt (E2E Garden Double, Rs. 22,000).

Assumptions: Package price includes every listed activity for each traveler.

Nothing has been booked yet. Say "book the hotel" or "book the package" and I'll check availability and ask you to confirm, or tap Save itinerary to keep this plan.

Ella, Sri Lanka Within Budget

11 May 2027 – 13 May 2027 · 3 days / 2 nights · 2 travelers

► Assumptions

Saved

Saved to your itineraries.

► Rule-based · 10 tool calls

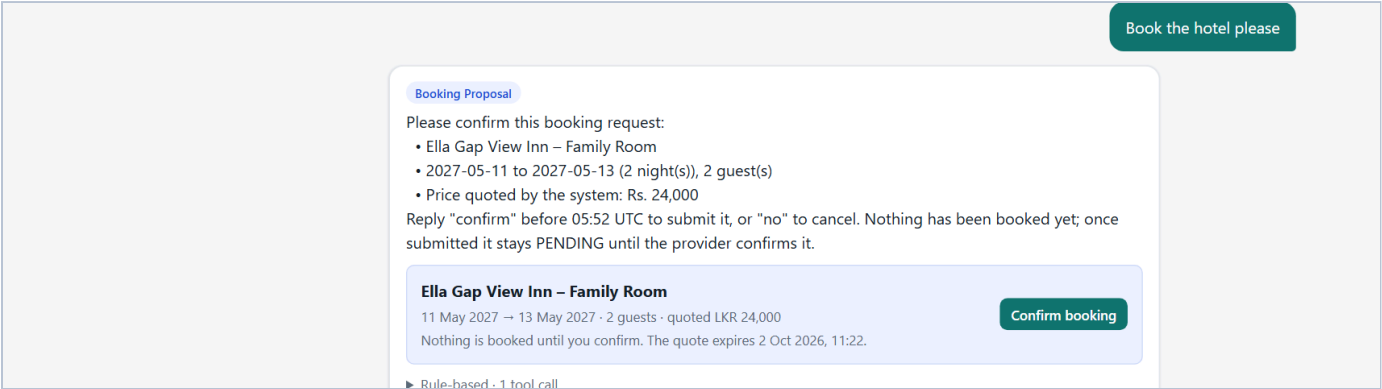

e.g. 4 days in Ella for 2 people, budget LKR 120,000, we love hiking Send

The request "Plan a 3-day trip to Ella ... for 2 people with a budget of LKR 50000" returns a plan built from the live catalog: the stay (availability checked), the package, a day-by-day itinerary and the total against the budget ("Within Budget"). The plan was then saved with "Save as itinerary".

Automated tests: Playwright ai-journey.spec.ts (the plan, the stored conversation and recommendations, and the saved itinerary are checked in PostgreSQL); AssistantPage.test.tsx

Screen 9. AI assistant: booking proposal

Role: Traveler (USER) · URL: /assistant?c=1114

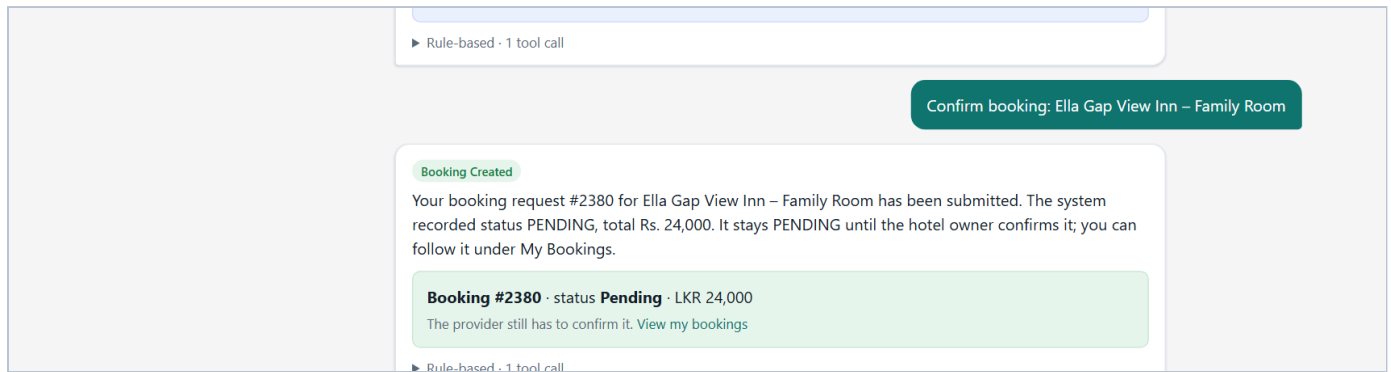

"Book the hotel please" produces a proposal with the dates, guests and the price quoted by the system. Nothing is booked until the traveler presses Confirm booking.

Automated tests: Playwright ai-journey.spec.ts (no Bookings row exists before Confirm); AssistantPage.test.tsx

Screen 10. AI assistant: booking created

Role: Traveler (USER) · **URL:** /assistant?c=1114

After Confirm booking, the backend creates the booking and the assistant reports the status the backend recorded: Pending. It does not claim the booking is confirmed.

Automated tests: Playwright ai-journey.spec.ts (the booking row and its price are checked in PostgreSQL)

Screen 11. My bookings (traveler)

The same web app at 390 px wide: the navigation and search adapt to a phone screen.

Automated tests: No automated layout test for the web app at phone width

Screen 34. Phone-width layout: AI assistant

Role: Traveler (phone width) · **URL:** /assistant

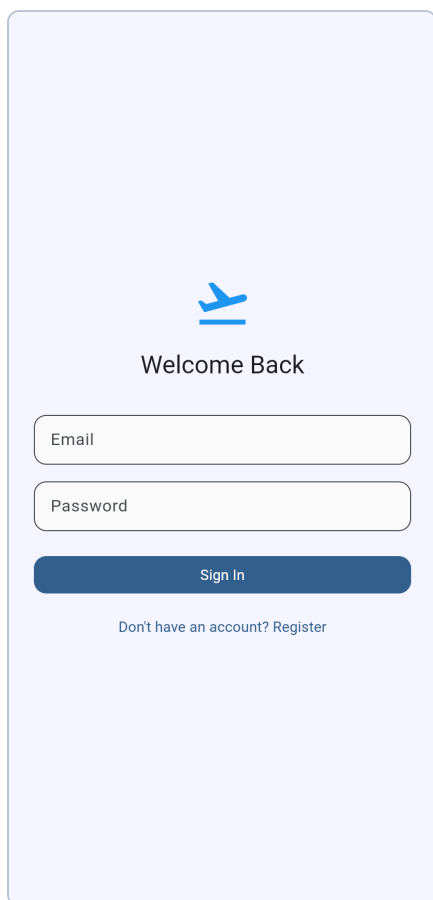

The assistant at 390 px wide, signed in as the walkthrough traveler, showing the conversation list and recent recommendations.

Automated tests: No automated layout test for the web app at phone width

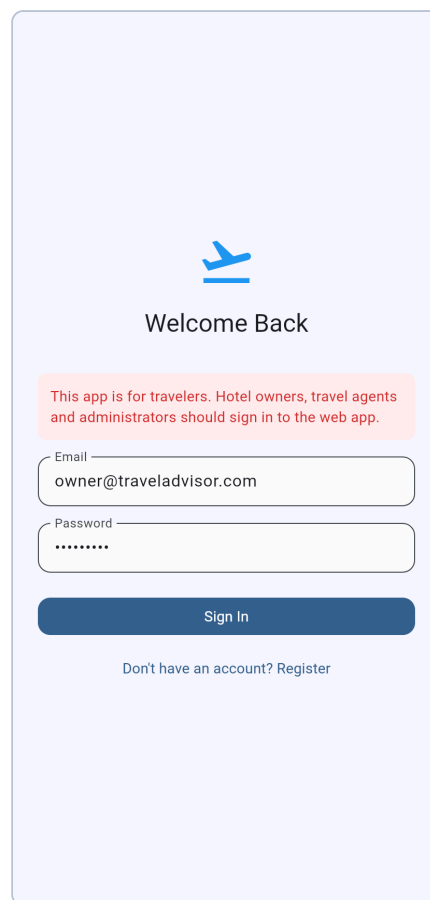

Part 3. Flutter mobile app

The mobile app is for travelers. It was built for web from the current code and driven through Flutter's accessibility (semantics) tree, signed in as the same traveler as Part 2. It is the same Dart code that runs on Android; Android-specific behaviour (secure storage, the emulator address) is not shown here.

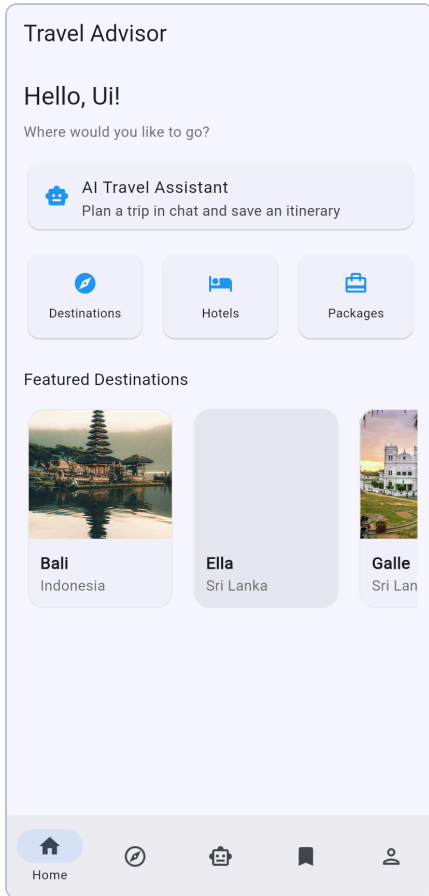

M1. Sign-in screen

Tests: auth_test.dart; screens_test.dart

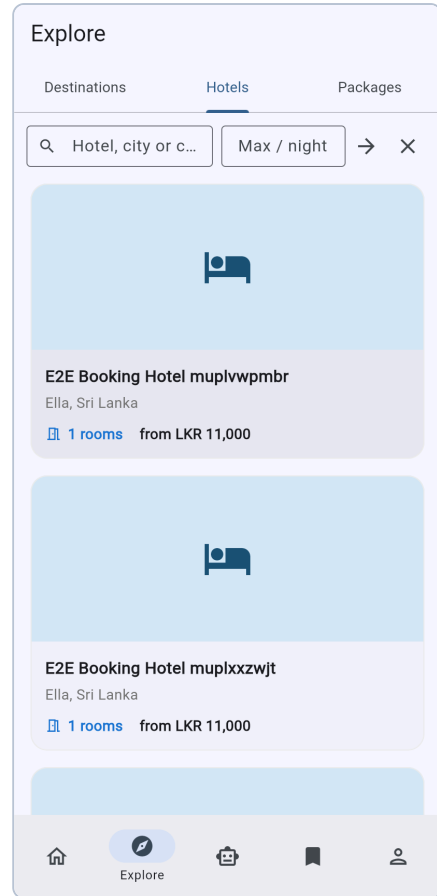

M2. A hotel owner tries to sign in: "This app is for travelers..." and the session is not kept

Tests: auth_test.dart; screens_test.dart; traveler_journey_test.dart (DEF-014)

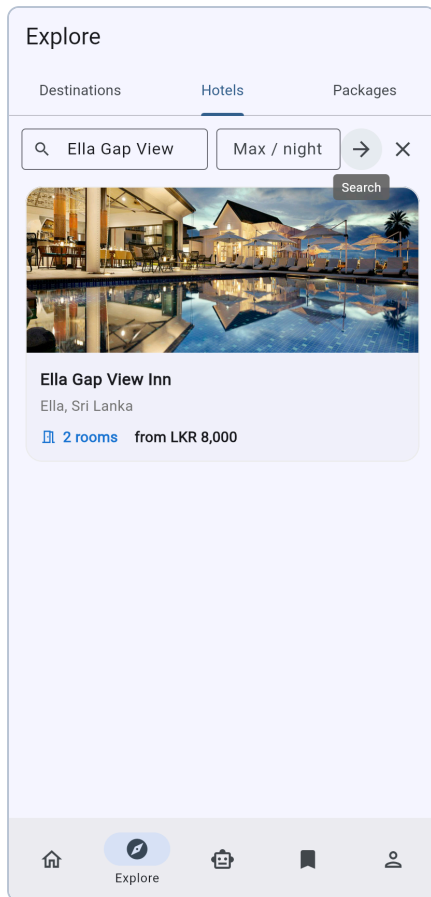

M3. Traveler home: AI assistant shortcut, Destinations, Hotels, Packages and featured destinations

Tests: app_flow_test.dart

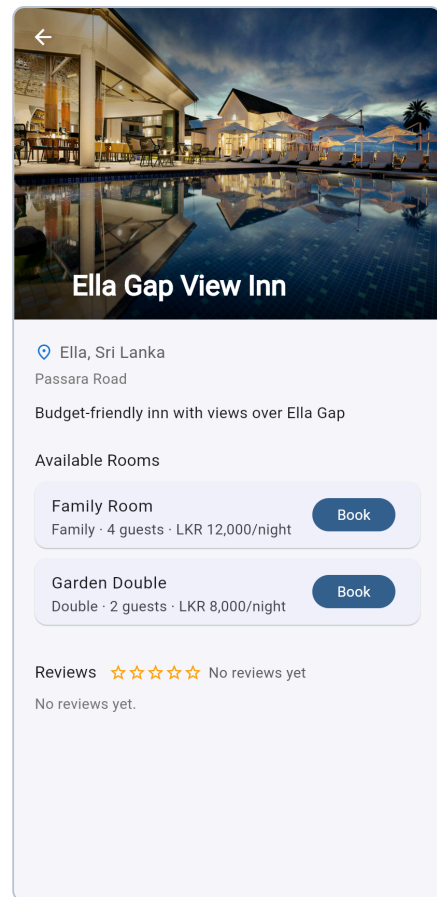

M4. Explore > Hotels: approved hotels with "from LKR" prices

Tests: app_flow_test.dart

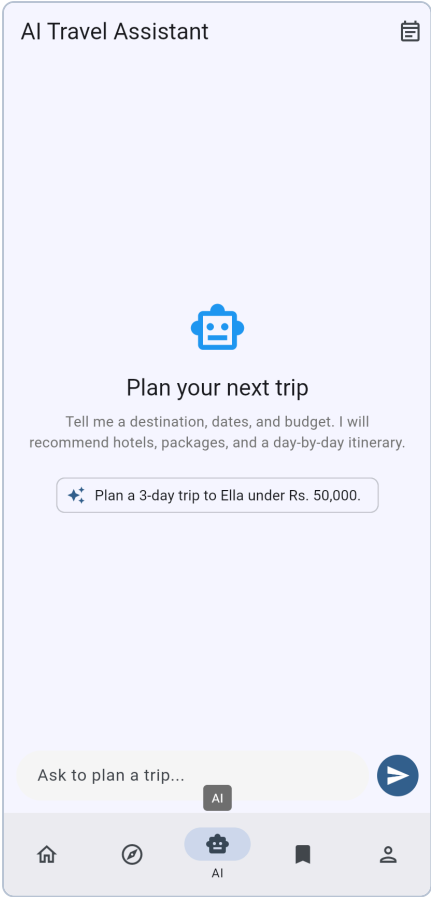

M5. Hotel search for "Ella Gap View"

Tests: app_flow_test.dart (keywords and a maximum price are sent to the API)

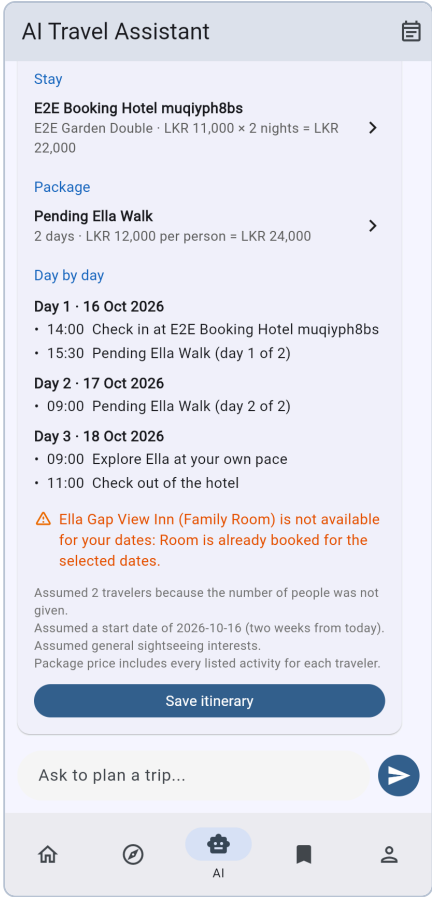

M6. Hotel detail: photo, address, description and available rooms with Book

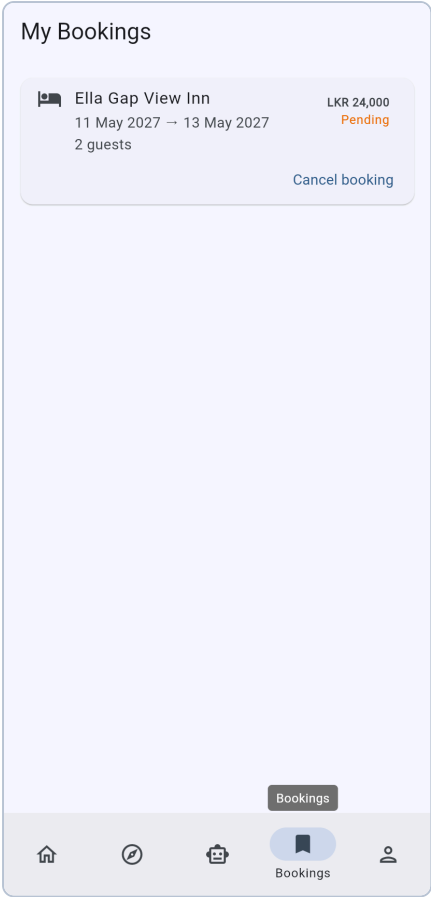

Tests: app_flow_test.dart; traveler_journey_test.dart

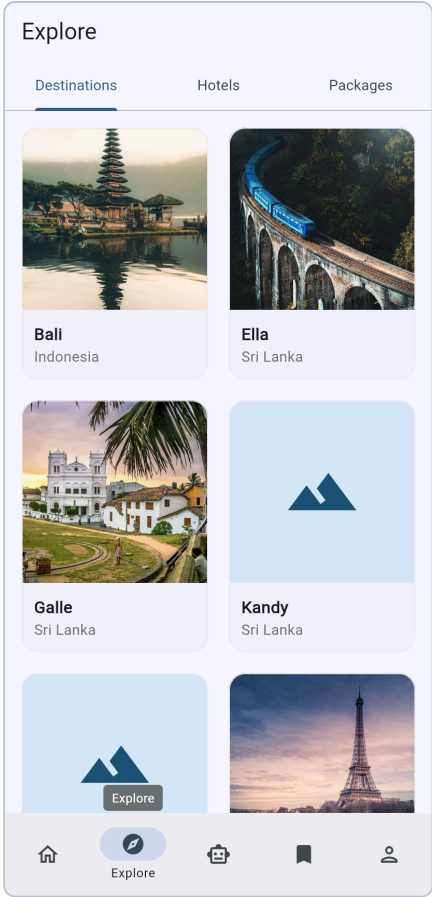

M7. AI assistant: start screen with a suggested request
Tests: chat_provider_test.dart; app_flow_test.dart

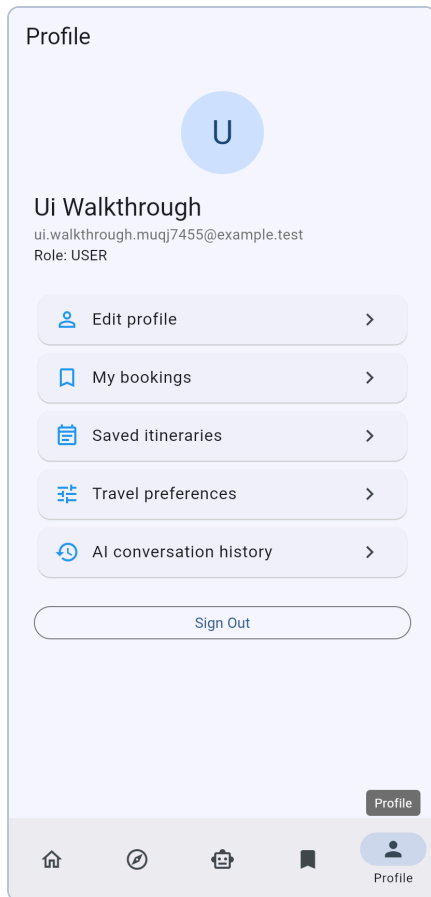

M8. AI assistant: the plan for the suggested request (bottom of the plan card). The warning in orange is real: the Family Room at Ella Gap View Inn is already booked for the suggested dates, so the plan uses another hotel and says why
Tests: app_flow_test.dart (the plan card, warnings and Save itinerary)

M9. My Bookings: the booking made in the web walkthrough, status Pending, with Cancel booking
Tests: app_flow_test.dart; traveler_journey_test.dart

M10. Explore > Destinations
Tests: app_flow_test.dart

M11. Profile: name, email, role USER and links to bookings, itineraries, preferences and AI history

Tests: app_flow_test.dart

Part 4. How to repeat the capture

UI tests with screenshots

Start the API (Testing Guide, section 2.4) and load `E2E_DB_CONNECTION` (section 2.3). Playwright starts the Vite dev server itself. To keep a screenshot of every test, run with a config that sets `use.screenshot` to `'on'`; the default config keeps screenshots only for failed tests:

```
cd T:\web-react
npm run e2e # default: screenshot + trace only on failure
node node_modules/@playwright/test/cli.js show-report
```

In the HTML report, open a test to see its steps and attached screenshot.

Web and mobile walkthroughs

Sign in to the web app at `http://localhost:5173` with a traveler account or a Development demo account (listed under "Development demo accounts" on the sign-in page), and open the pages listed in Part 2. For the mobile app, run `flutter run -d chrome --dart-define=API_BASE_URL=http://localhost:5080` from `mobile-app`, or install the Android build (README).
