

Agentic AI Travel Advisor & Booking System

Test Report Screenshots

Screenshots of the real test reports and recorded test output, one figure per page, for every test suite. This document accompanies `testing/Testing-Guide-and-Report.pdf`, which explains how to run each suite and how to read its report.

Two kinds of figure are included. **Report screenshots** are captured from the HTML report files written by the tools (dotnet test HTML logger, Playwright, Newman, OWASP ZAP). **Console screenshots** show excerpts of the recorded console output in `testing/execution-results/`, displayed unchanged in a terminal-style frame. Each figure names its source file.

Recorded final runs: 2026-10-01. The two .NET HTML reports and the evidence check come from runs on 2026-10-02 against the same code. Screenshots captured: 2026-10-02.

Figures

1. Backend unit tests (xUnit + Moq)

- Figure 1. HTML test report
- Figure 2. Recorded console output of the final run

2. API, database and security tests (WebApplicationFactory + Testcontainers)

- Figure 3. HTML test report
- Figure 4. Recorded console output of the final run

3. React unit and page tests (Vitest + React Testing Library + MSW)

- Figure 5. Recorded console output of the final run

4. Browser end-to-end tests (Playwright on the real API and database)

- Figure 6. Playwright HTML report: overview
- Figure 7. Playwright HTML report: one test opened
- Figure 8. Recorded console output of the final run

5. Flutter tests

- Figure 9. Widget and service tests (flutter test)
- Figure 10. Integration test on the real API (flutter drive, Chrome)

6. API contract suite (Postman collection run with Newman)

- Figure 11. Newman HTML report: dashboard
- Figure 12. Newman HTML report: Total Requests tab
- Figure 13. Recorded console summary

7. Load tests (k6)

- Figure 14. k6 login: thresholds and checks
- Figure 15. k6 catalog-search: thresholds and checks
- Figure 16. k6 booking: thresholds and checks
- Figure 17. k6 ai-chat: thresholds and checks

8. Security scans (OWASP ZAP)

- Figure 18. ZAP report: Authenticated API scan (signed in as a USER)
- Figure 19. ZAP report: Unauthenticated API scan
- Figure 20. ZAP report: Baseline (passive) scan
- Figure 21. Recorded totals lines of the three scans

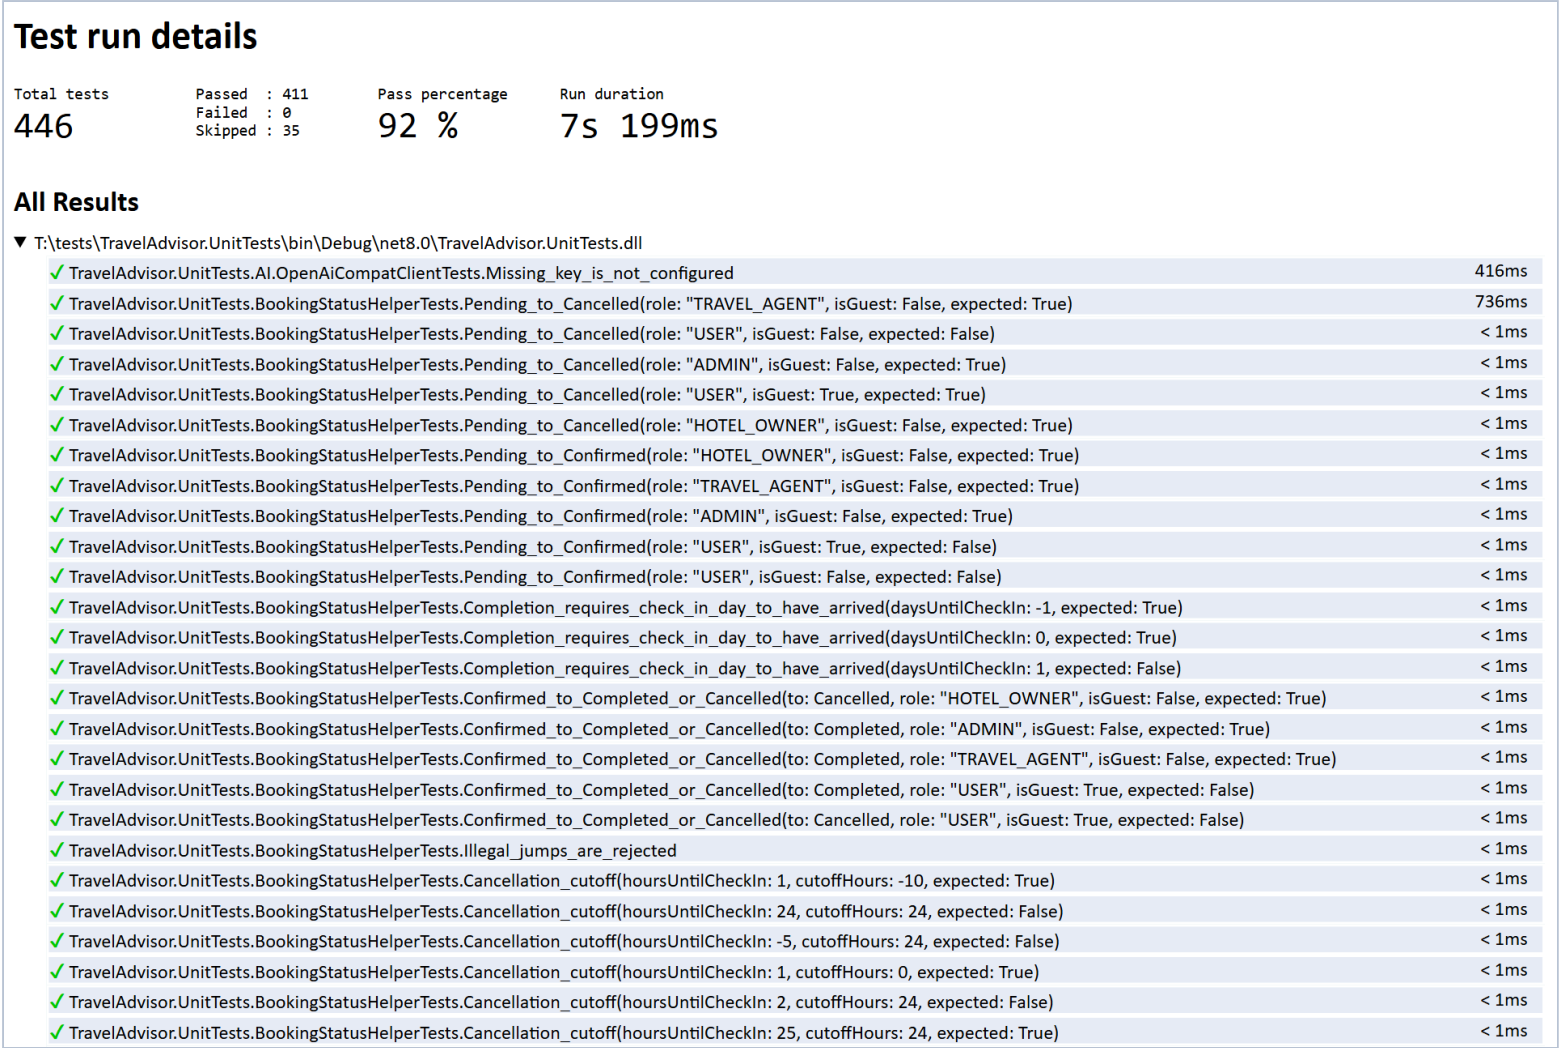

9. AI evaluation and test-case evidence check

- Figure 22. AI evaluation report (scripted cases A-J)
- Figure 23. Test-case evidence check

1. Backend unit tests (xUnit + Moq)

Figure 1. HTML test report

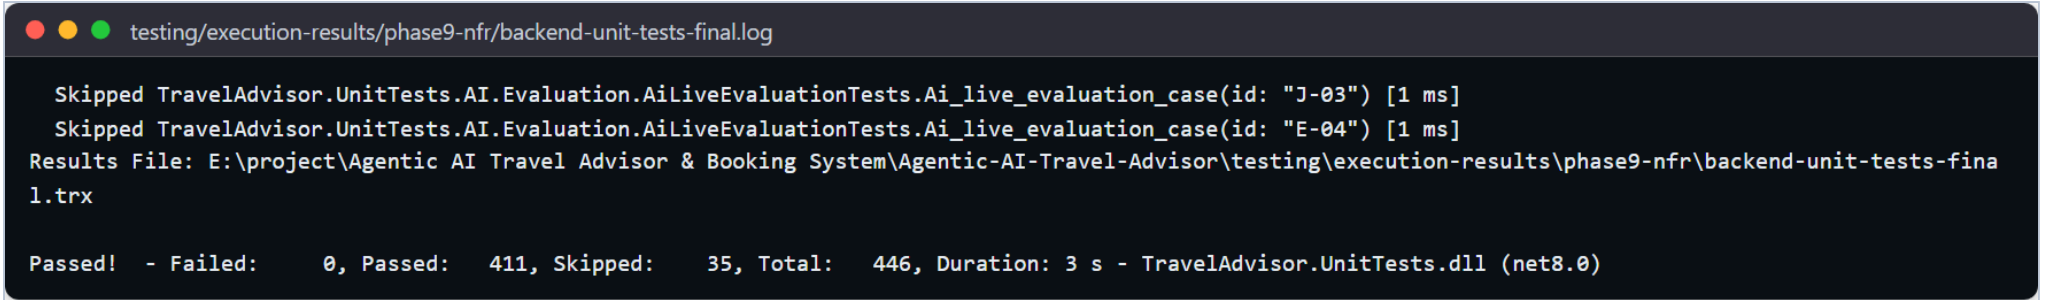

Report file: TestResults/unit-tests.html
How to get it: dotnet test tests/TravelAdvisor.UnitTests --logger "html;LogFileName=unit-tests.html", then open the file in a browser.

The All Results list is expanded to show each test with its outcome and duration. Report produced by a run on 2026-10-02 against the final code: 446 tests, 411 passed, 0 failed, 35 skipped (the live-LLM cases, which need AI_EVAL_API_KEY).

Figure 2. Recorded console output of the final run

Source: testing/execution-results/phase9-nfr/backend-unit-tests-final.log

A screenshot of a console window with a dark background and light-colored text. The window title bar shows three colored circles (red, yellow, green) followed by the file path 'testing/execution-results/phase9-nfr/backend-unit-tests-final.log'. The console output shows two skipped test cases, the results file path, and a summary line indicating 0 failed, 411 passed, 35 skipped, and 446 total tests in 3 seconds.

```

8. Security scans (OWASP ZAP)

Figure 18. ZAP report: Authenticated API scan (signed in as a USER)

Report file: testing/security/zap/reports/zap-api-user.html
How to get it: .\testing\security\run-zap.ps1 -Mode api-user, then open the HTML file.

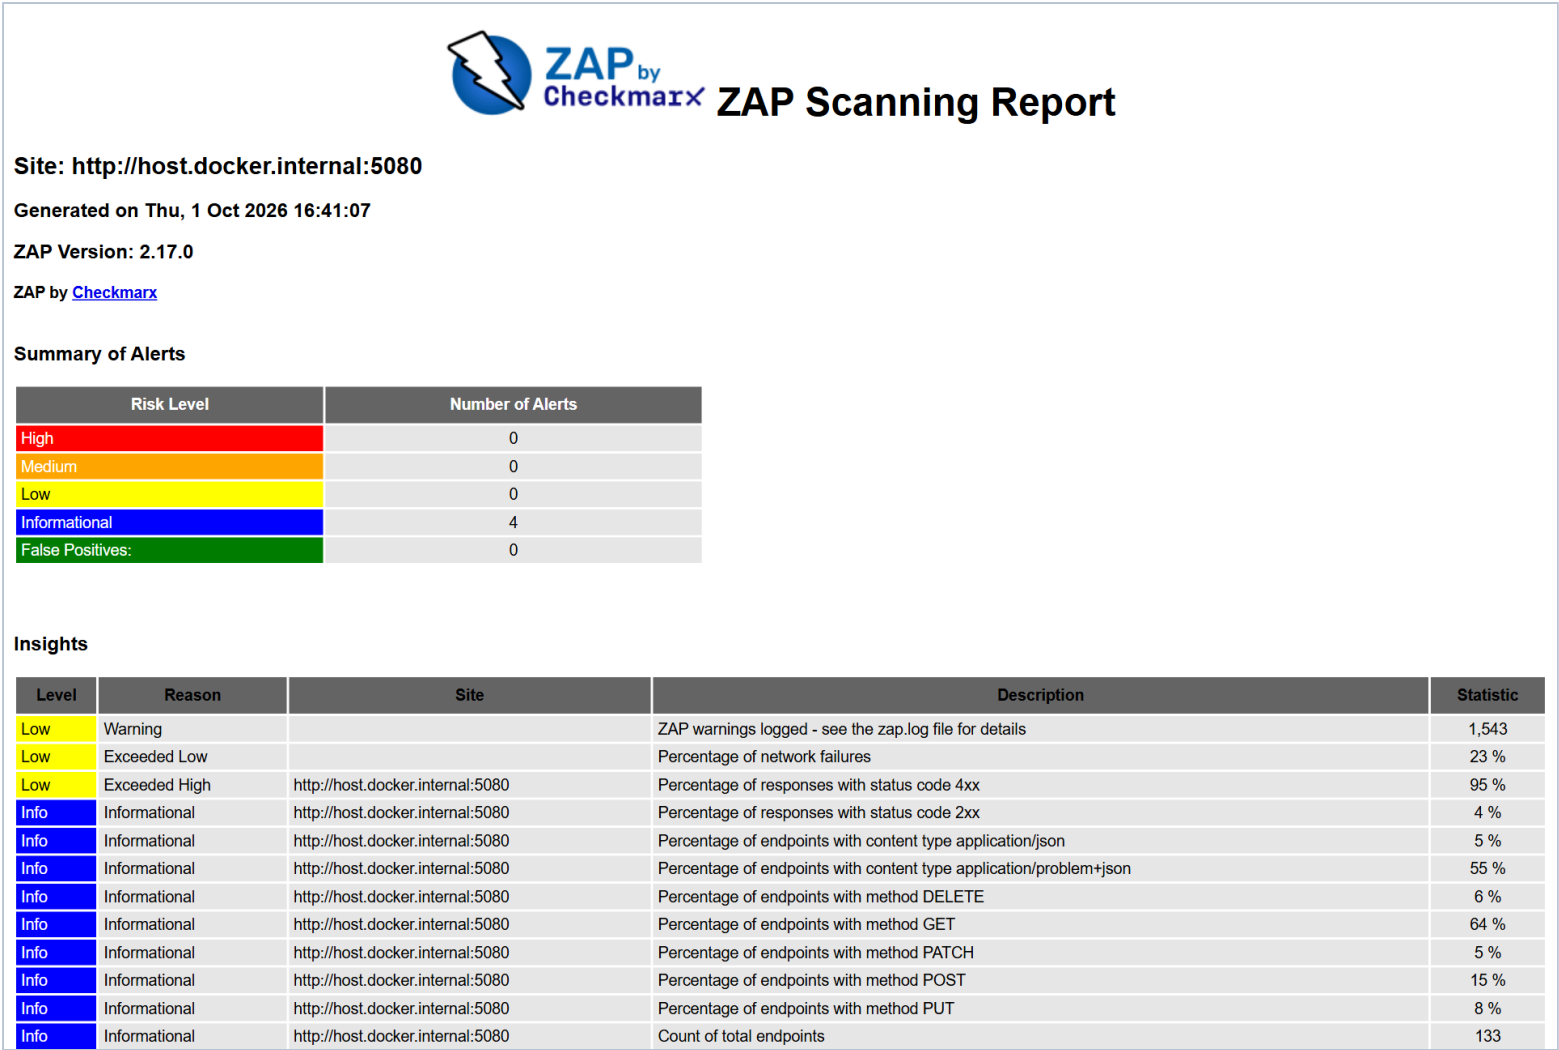

Report of the final api-user scan (2026-10-01). The Summary of Alerts table counts the alerts per risk level.

Figure 19. ZAP report: Unauthenticated API scan

Report file: testing/security/zap/reports/zap-api.html

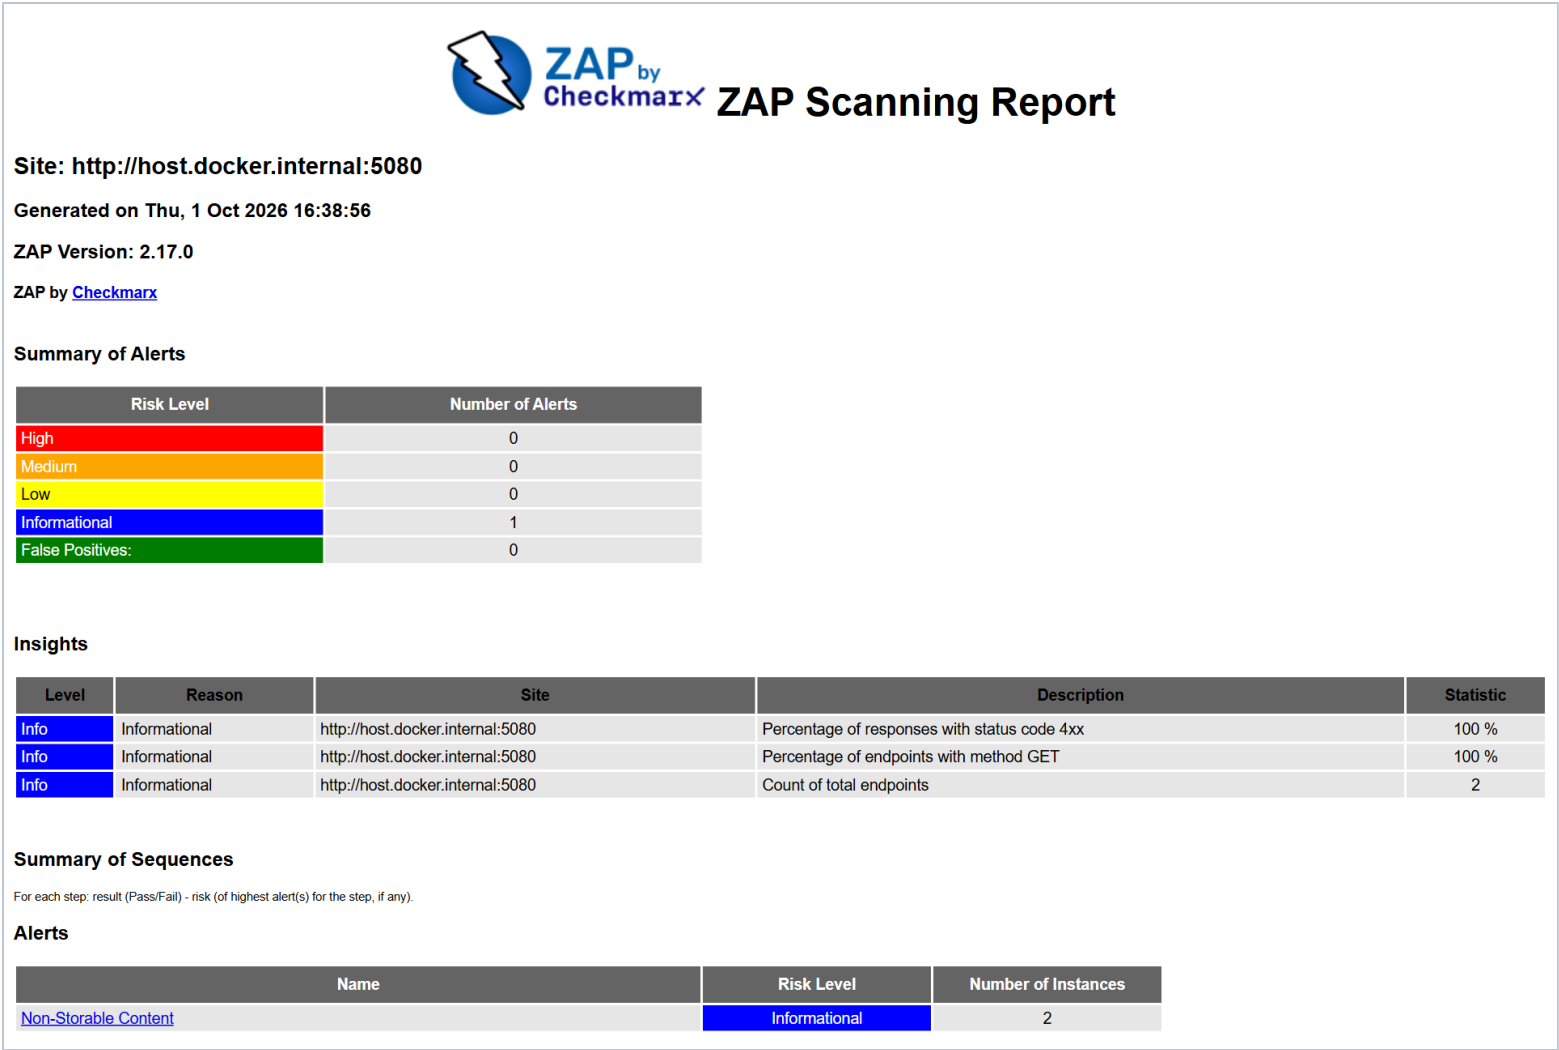

How to get it: .\testing\security\run-zap.ps1 -Mode api, then open the HTML file.

Report of the final api scan (2026-10-01). The Summary of Alerts table counts the alerts per risk level.

Figure 20. ZAP report: Baseline (passive) scan

Report file: testing/security/zap/reports/zap-baseline.html
How to get it: .\testing\security\run-zap.ps1 -Mode baseline, then open the HTML file.

Report of the final baseline scan (2026-10-01). The Summary of Alerts table counts the alerts per risk level. This scan raised 1 warning, triaged as by design (see figure 21).

Figure 21. Recorded totals lines of the three scans

Source: testing/execution-results/phase9-nfr/zap-api-user.log, zap-api.log, zap-baseline.log

```

testing/execution-results/phase9-nfr/zap-api-user.log, zap-api.log, zap-baseline.log

==> testing/execution-results/phase9-nfr/zap-api-user.log (last 3 lines)
PASS: Remote OS Command Injection (Time Based) [90037]
FAIL-NEW: 0      FAIL-INPROG: 0  WARN-NEW: 0      WARN-INPROG: 0  INFO: 0 IGNORE: 0      PASS: 118
ZAP api-user finished with exit code 0 after 2 min (0 = no warnings, 1 = at least one FAIL, 2 = warnings only, 3 = error).

==> testing/execution-results/phase9-nfr/zap-api.log (last 3 lines)
PASS: Remote OS Command Injection (Time Based) [90037]
FAIL-NEW: 0      FAIL-INPROG: 0  WARN-NEW: 0      WARN-INPROG: 0  INFO: 0 IGNORE: 0      PASS: 118
ZAP api finished with exit code 0 after 2 min (0 = no warnings, 1 = at least one FAIL, 2 = warnings only, 3 = error).

==> testing/execution-results/phase9-nfr/zap-baseline.log (last 7 lines)
WARN-NEW: Non-Storable Content [10049] x 2
    http://host.docker.internal:5080 (404 Not Found)
    http://host.docker.internal:5080/robots.txt (404 Not Found)
FAIL-NEW: 0      FAIL-INPROG: 0  WARN-NEW: 1      WARN-INPROG: 0  INFO: 0 IGNORE: 0      PASS: 66
Automation plan warnings:
    Job spider error accessing URL http://host.docker.internal:5080 status code returned : 404 expected 200
ZAP baseline finished with exit code 2 after 2 min (0 = no warnings, 1 = at least one FAIL, 2 = warnings only, 3 = error).

```

API scans: 118 rules passed, FAIL-NEW 0 and WARN-NEW 0, exit code 0. Baseline scan: 66 rules passed, 0 failures and 1 warning, Non-Storable Content (10049) on the 404 responses for / and /robots.txt, so ZAP exited with code 2 (warnings only). The warning was triaged as by design: the API does not serve those pages and sends Cache-Control: no-store on every response (phase 9 summary, ZAP triage table).

9. AI evaluation and test-case evidence check

Figure 22. AI evaluation report (scripted cases A-J)

Source: `testing/execution-results/phase8-tests/ai-evaluation/ai-evaluation-report.md`

How to get it: Written by the `AiEvaluationTests` run; open the `.md` file (a `.json` copy sits next to it).

```
testing/execution-results/phase8-tests/ai-evaluation/ai-evaluation-report.md

# AI evaluation (deterministic, mocked LLM)

Generated by the test run on 2026-10-01 19:17 (local time). Every row is the recorded outcome of that run.

Setup: the production `AgentOrchestrator`, agents, tools, `ToolRegistry`, JSON-schema validation, `PromptInjectionGuard` and `OutputSanitizer`. The catalog, booking and user services are Moq mocks holding a small Ella catalog (rooms 5, 6, 7; package 7; transport 1, 2). Cases without a script run with no LLM configured (the deterministic agents). Cases with a script use `ScriptedLlm`, a fake `ILlmClient` that replays fixed model responses. Besides its own checks, every case is held to the global invariants: no secrets or system-prompt text in any reply, no unverified booking claims, refused turns run no tools, every plan is schema-valid, within budget and uses catalog items only, and backend bookings only after an explicit confirmation.

**Cases run: 71. Passed: 71. Failed: 0. Skipped: 0.**

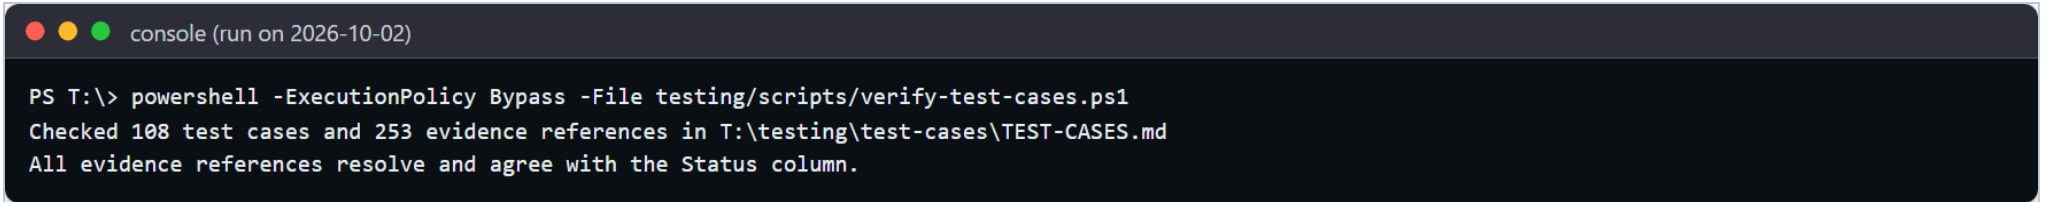

| Category | Cases | Passed | Failed |
| ---| ---| ---| ---|
| A. Task completion | 5 | 5 | 0 |
| B. Agent selection | 6 | 6 | 0 |
| C. Tool selection | 7 | 7 | 0 |
| D. Structured output | 5 | 5 | 0 |
| E. Budget compliance | 6 | 6 | 0 |
| F. Business rule compliance | 6 | 6 | 0 |
| G. Prompt injection | 11 | 11 | 0 |
| H. Approval enforcement | 10 | 10 | 0 |
| I. Failure recovery | 7 | 7 | 0 |
| J. Safe failure | 8 | 8 | 0 |
```

Header and summary of the recorded report: 71 cases run, 71 passed.

Figure 23. Test-case evidence check

Source: console (run on 2026-10-02)

How to get it: powershell -ExecutionPolicy Bypass -File testing/scripts/verify-test-cases.ps1

A screenshot of a PowerShell console window. The title bar at the top shows three colored circles (red, yellow, green) followed by the text "console (run on 2026-10-02)". The console content shows the command "PS T:\> powershell -ExecutionPolicy Bypass -File testing/scripts/verify-test-cases.ps1" and its output: "Checked 108 test cases and 253 evidence references in T:\testing\test-cases\TEST-CASES.md" and "All evidence references resolve and agree with the Status column.".

```
PS T:\> powershell -ExecutionPolicy Bypass -File testing/scripts/verify-test-cases.ps1
Checked 108 test cases and 253 evidence references in T:\testing\test-cases\TEST-CASES.md
All evidence references resolve and agree with the Status column.
```

Every evidence reference in the test-case catalogue resolves to a recorded result that agrees with its Status column.
